LASER DIODE MODELS AND FOCUSING OPTIONS

At Osela we provide many different focusing options giving you the flexibility to choose the one that best suits your application. The ILS laser is free focusable externally without removing any optics. From the graphs below, note the beam size and Depth of Focus (DOF) values and then multiply by the K constants for the laser diode model and focus option of choice (A, C, or D).

Example: From the graphs at 400 mm working distance, Focus = 140µm, DOF = 36 mm. Than for Laser Model 670nm 500 mW the line thickness at focus for OPTION A will be 133um (i.e. 140 um x 0.95). Its depth of focus will be 29.16mm (i.e. 36mm x 0.81).

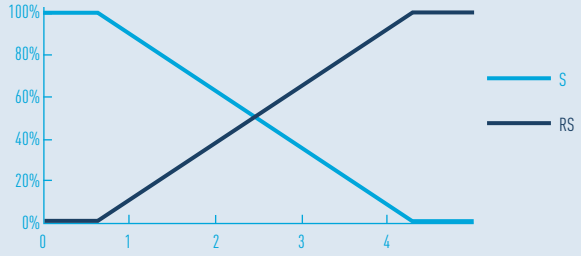
MODULATION

The ILS can be modulated by an external 0 to 5V signal on PIN#2 of DB9 Connector. The **S type** modulation comes by default.

FUNCTION	CODE	ON	OFF
TTL	T	0 to 2V	3V to 5V
Reverse TTL	RT	3V to 5V	0 to 2V



Note: One modulation input needs to be selected, S (default), RS, T or RT
